

RADWIN Drives Progress in Rural India

- RADWIN chosen by the Sonet organization to provide Internet and e-Learning to residents in rural India -

Tel-Aviv, Israel – November 21, 2006 - RADWIN (www.radwin.com), a leading provider of advanced wireless broadband solutions, today announced that it was chosen by the Sonet, an India-based non-profit organization whose mission is to promote development and progress in rural India. Sonet chose RADWIN's WinLink™ 1000 systems to connect villages in the region and enable residents to access the Internet and benefit from e-Learning, Telemedicine and e-Government initiatives. VLink Systems, RADWIN's partner and a leading vendor and system integrator in India, was charged with project implementation.

"RADWIN's WinLink™ 1000 systems came out ahead of all the other wireless equipment that we tested in terms of reliability, performance and price," said Ravi Codala, IT Manager of the Sonet organization. "Working together, Sonet and RADWIN are making a tremendous impact on the lives of thousands of residents in the region by giving them access to information and services that were previously unavailable. We couldn't be more impressed with the implementation and ongoing functionality of the RADWIN network, and plan on using these systems to connect more towns and villages in the future."

RADWIN's WinLink™ 1000 wireless broadband systems give the Sonet organization the high-bandwidth, cost-effective connectivity they need. Since they were deployed, the systems have been operating without a hitch, including in non line-of-sight conditions and over distances of more than 60 Km.

"We are proud to have been chosen by the Sonet organization," said Eran Kaplan, RADWIN's Vice President of Sales. "RADWIN's systems are the ideal solutions for rural connectivity projects because they are reliable, robust and provide high bandwidth at an extremely competitive price. This latest project reaffirms our commitment to India and highlights the value of wireless broadband as the ultimate solution for bringing information and education to all areas of the world."
