

Installation

1. Prepare a SIM card so that the PIN code is 1234 or is deactivated. Mount the card in the unit. The unit has now 1234 as password or runs without a password. The card is turned up the way shown below.
2. Connect inputs, outputs and power cable (230V/12-24V AC/DC). If necessary a rechargeable 9V battery.
3. Turn on the power. A green diode is lit and thereafter a red one. After approx. 20 sec. the red diode flashes approx. every 2 sec. and the unit is ready.

The GSM unit interior

DIP-switch for analog input

- 1 ON: 0-10 VDC
- 2 ON: 0/4-20 mA
- 3 ON: PT-100
- 4 ON: Profort temperature sensor
- All OFF: digital input

Voltage

- Output: AC max. 230 VAC, 6A
DC max. 30 VDC, 6A
 - Input, digital: max. 24 VDC
max. power 2 mA
 - Input, analog: max. 0-10 VDC
- Print only voltage when the DIP-switch 1 is on, and 2-4 are off

SET-UP

Set-up on PC via the PC COM-port

1. Connect the unit to the PC's COM-port with an RS-232 cable or a USB-RS232 converter (the driver of the converter must be installed).
2. Install the Profort PC Program on a computer with Windows. Start the program and enter the product key which is labelled on the CD cover.
3. Enter the number on the COM-port that the PC uses.
4. Fill in the rest of the set-up program and complete it by transferring the information to the unit.

Additional help: press F1 in the program, see the manual on the CD or www.profort.com

Set-up on PC via the Internet

1. Install the Profort PC Program on a PC with Windows. Start the program and enter the product key which is labelled on the CD cover.
2. Mark 'Connection via Internet' and choose a unique 'USERNAME'. You will need the username to log on the website www.profort.com and/or to activate the online connection of the unit.
3. Send following texts to the unit:
(Note: 1234 = password, 0 = zero, space counts as a character and is therefore important)
 - a. `1234 N0 99999999` Defines the unit phone number N0 = N + zero, 99999999 = the unit phone number
 - b. `1234 EH USERNAME` Sends the username to the unit and activates the Internet connection
 - c. If necessary, indicate APN (the telephone operator's connection to the Internet). In Denmark there are two following options:
 - `1234 EG internet` The common APN. By default preprogrammed.
 - `1234 EG www.internet.mtelia.dk` APN for the company Telia
4. Fill in the rest of the set-up program on the PC. Complete it by transferring the information to the unit.

Additional help: press F1 in the program, see the manual on the CD or www.profort.com

SET-UP

Set-up with text message

1234 = password, 0 = zero, space counts as a character and is therefore important.

Define the unit phone number and change password, if necessary	1234 N0 xxxxxxxx yyyy (N0 = N + zero)	xxxxxxx = the unit mobile no. yyyy = new four-digit password Define the unit phone number (N0) and create a new password. New password is optional.	
Receivers Add	1234 Nx yyyyyyyy	Adds receiver x to receive text on phone number yy yy yy yy x = 1-9 + A-P, max. 25 receivers.	
	1234 Nx yyyyyyyy #	Adds receiver x to receive voice call (#) on phone number yy yy yy yy	
	Delete 1234 Nx	Deletes receiver x. x = 1-9 + A-P	
Text on input Add	1234 Ax TEXT	TEXT on input x at open/close. x = 0-7	
	1234 Lx TEXT	TEXT on input x at close/join. x = 0-7	
	Delete	1234 Ax	Deletes TEXT for input x at open/close. x = 0-7
		1234 Lx	Deletes TEXT for input x at close/join. x = 0-7
Only alarm if text is added	1234 CT	The unit ignores input that has no text attached.	
Add analog input	1234 Vx S yyyy zzzz	Set-up of the scale (yyyy = minimum zzzz = maximum) for 0-10 V and for 0-20 mA. x = 1-2	
	1234 Vx M yyyy zzzz	Set-up of values for the intervals LOW, MIDDLE and HIGH (Point 1 and Point 2) on analog input x. x = 1-2. If the value on the input gets bigger or smaller than yyyy (Point 1) or bigger or smaller than zzzz (Point 2), an alarm is sent.	
	1234 Vx A TEXT	Alarm text LOW on analog input x is sent when the value becomes smaller than the value defined in Point 1/yyyy (Vx M yyyy zzzz).	

SET-UP

	1234 Vx L TEXT	Alarm text MIDDLE on analog input x is sent when the value becomes higher than the value defined in Point 1/yyyy or lower than the value in Point 2/zzzz (Vx M yyyy zzzz).
	1234 Vx B TEXT	Alarm text HIGH on analog input x is sent when the value becomes higher than the value defined in Point 2/zzzz (Vx M yyyy zzzz).
Zone Add on input	1234 Ax Zy TEXT 1234 Lx Zy TEXT	Adds TEXT on input x at open (Ax) and close (Lx) as well as placing the input in zone y. x = 0-7, y= 0-7. All inputs are by default placed in zone 0. Alarms in zone 0 are sent to receivers in zone 0 as well as receivers outside of zones (zone blank). Alarms in zone 1 are sent to receivers in zone 1 as well as in zone blank and so on.
Zone Add on receiver	1234 yx zzzzzzzz	Adds receiver x with the phone number zz zz zz zz in zone y. y = 0-7, x = 1-9 + A-P. All receivers are initially placed outside the zone (zone blank). Receivers in zone blank get all alarms from all zones. Receivers in zone 0 only get alarms from zone 0 (Notice that all inputs are placed in zone 0 if they are not allocated to another zone). Receivers in zone 1 only get alarms from zone 1, receivers in zone 2 from zone 2 and so on.
	Example: 1234 21 88888888	= Adds receiver 1 with phone number 88 88 88 88 in zone 2
Activate output in case of alarm	1234 Gx	x = 1-9 (1 = 10 sec., 2 = 20 sec., 3 = 30 sec., 4 = 1 min, 5 = 2 min, 6 = 4 min, 7 = 8 min, 8 = 16 min and 9 = continuous.) Sets the relay output to activate for x time in case of alarm on an input.
Output follows state on input	1234 GA	Indicates that the output follows the corresponding input if text is added. Notice: input signal has higher priority than command S0 (S + zero) and B0 (B + zero)
Alarm in case of power failure	1234 JS	Sends an alarm after approx. 10 sec. in case of power failure

Additional help: see the manual on the CD or on www.profort.com

CONTROL

Control with call from telephone

Call the unit. Press 1234 (password) when the connection is established, and await two 'beeps'. Press the desired code and hang up.

Code examples:

*0x (x = 0-3 for output 0-3)	Pulses output x for 10 sec.
*1x (x = 0-3 for output 0-3)	Opens output x
*2x (x = 0-3 for output 0-3)	Closes output x
x (x = 0-9 for macro 0-9)	Performs macro x
# during playing of voice message	The message is not sent to the following in the receiver list

Control with text message

Connect/disconnect the unit	1234 ON	Inputs are activated, red diode flashes
	1234 OF	Inputs are deactivated, red diode turns off
Activation of output x	1234 Sx	Closes output x. x = 0-3
	1234 Bx	Opens output x. x = 0-3
	1234 Px	Pulses output x for approx. 10 sec. x = 0-3
Download	1234 OK	Downloads information about GSM transmission power and battery level Example: OK>>OK SQ: xx% xx = transmission power in percentage. 25 % is smallest acceptable value
	1234 Vx R	Downloads measurements on the analog input x. x = 1-2
Connection to the Internet	1234 EH USERNAME	GPRS traffic starts
	1234 EH	GPRS traffic stops

Other control

The unit can also be controlled by use of the PC program and some functions can be controlled directly on the Internet.

See more in the manual or log on Internet management via www.profort.com

VOICE MESSAGE

Record messages

1. Call the unit
2. Await a tone
3. Type in a password (e.g. 1234), optional
4. Await two tones
5. Type in no. of the message that needs to be recorded, e.g. #8 (for general message)
6. Await a tone
7. Record message
8. Await two tones
9. The call can be ended or a new voice message can be recorded, e.g.:
10. Press #1 (opens for input 1)
11. Await a tone
12. Record the voice message for input 1
13. Repeat point 9-11 for more messages, if needed
14. Hang up

The unit can be set up to deliver different messages (max. three sec.) for closing and opening of inputs. Send a text message with the command `1234 W2` before recording the messages.

Codes for recording of voice messages

#8 General message 6 sec.

Digital inputs

#0 for input 0 6 sec.
#1 for input 1 6 sec.
#2 for input 2 6 sec.
#3 for input 3 6 sec.
#4 for input 4 6 sec.
#5 for input 5 6 sec.
#6 for input 6 6 sec.
#7 for input 7 6 sec.

Analog inputs

#90: analog input 0 6 sec.
#91: analog input 1 6 sec.
#92: analog input 2 6 sec.
#93: analog input 3 6 sec.
System alarm
#94: power failure 3 sec.
#95: power ok 3 sec.
#96: sabotage 3 sec.
#97: connecting 3 sec.
#98: disconnecting 3 sec.

SPECIFICATIONS

Power supply

230V AC min. 0,1A
12-24V AC/DC min 0,5 A

Usage

Approx. 30 mA when resting (supplied with 12 V)
5 W supplied with 230 V

Outputs

Max. 6 A at 230V AC
Max. 6 A at 35V DC

Inputs, digital

Max. 1V, 2 mA (GND)
Min. 18V max 30 V (24V DC)

Inputs, analog

0-10V DC
0/4-24mA
PT-100
Profort temperature sensor (007995)

Counter

Max. 20Hz. Max. a mio. counts

Dimension

9 DIN-modules
157x86x57 mm
Weight: 360 g.

Temperature

- 20 °C - +55 °C

Voice memory

90 sec.

Antenna

1 internal antenna for GSM modem

Profort PC Program Quick set-up

Compliant with all versions of Windows.
The PC must have a COM-port (RS232), or it needs a USB-RS232 converter.
NB! Product key for the PC program is indicated on the CD cover.

Other PC programs

- "Basis setup". Expands the set-up options
 - "Professional setup" as an alarm centre on PCs supplied with GSM modem
-

OTHER PRODUCTS IN THE SERIES

GSM unit – 4-modules

- 1 relay output
- 1 digital input (Gnd/24V)
- 1 analog input
- 12-24 VDC power supply (acquisition)
- 3,6 V Li-ion back-up battery (acquisition)
- DIN-rail with four modules

GSM unit with wireless

- 4 relay outputs
- 1 analog output 0-10V
- 4 digital inputs (Gnd/24V)
- 4 analog inputs
- Wireless modem 868 Mhz
- 230 V / 12-24 V AC/DC power supply
- 9 V rechargeable back-up battery (acquisition)
- RS-232-port for PC or PLC
- IP-65 box
- Display (acquisition)

GSM unit with infrared

- 1 relay output
- IR output for external IR sender (acquisition)
- 2 senders of infrared codes
- 3 digital inputs (Gnd/24V)
- Temperature sensor
- 1 analog input
- 1 recorder for infrared codes
- 12 VDC power supply (inclusive)
- 3,6 V Li-ion back-up battery (inclusive)
- Box for wall mount
- Camera connection (acquisition)

IP-65 box for GSM unit

- Waterproof box
- DIN-rail for nine modules
